SUMMARY

A passionate Software Engineer and Informatics Engineering student with a strong focus on architecting and implementing scalable backend systems using JavaScript/TypeScript and Python. Proficient in RESTful API principles and gaining practical experience in cloud computing with AWS and GCP. Eager to contribute to impactful projects, solve complex challenges, and continually grow in dynamic environments, with a growing expertise in AI and its real-world application.

WORK EXPERIENCE

Fullstack AI Developer (Intern) | Universa AI | *may 2025 – July 2025*

- Responsible for the end-to-end design and development of a web application to generate protein structure predictions using an AI model.
- Engineered a reliable RESTful API to process user requests, interface with the core AI model, and serve prediction outcomes.
- Deployed the application on Hugging Face Spaces using Docker to ensure scalability and reproducibility.

PROJECTS

- **AI-Driven Protein Discovery**

Fullstack AI Web Project – July 2025

An AI-powered web application for predicting protein structures and visualizing them in 3D based on user prompts.

Tech Stack: Python, FastAPI, Streamlit, PostgreSQL, Docker, Huggingface Spaces

AI Technologies: Mistral AI LLM, DeNovo-PiNaI, ESMFold, ColabFold

Features: Protein structure prediction from text prompts, 3D visualization of protein structures, user interface for interacting with AI models.

Source code / Demo: <https://huggingface.co/spaces/sandervenz/origin-protein-clone>

- **OpenMusic API**

Backend Only Project – March 2025

OpenMusic API is a backend service used to manage music data, such as songs, albums, and playlists. It also supports playlist export features, album cover uploads, and caching to enhance performance.

Tech Stack: Hapi.js, PostgreSQL, JWT, Redis, Rabbitmq, AWS S3, nodemailer

Features: CRUD (songs, albums, playlists), album cover upload, authentication, playlist collaboration, server-side caching, playlist export, like & unlike albums

Source code: <https://github.com/sandervenz/openmusic-api>

- **Real-Time Chat App**

Fullstack Web Project – January 2025

A real-time chat application built using the MERN stack and WebSocket.

Tech Stack: Node.js, Express, Socket.io, React, MongoDB, Cloudinary, JWT, TailwindCSS, Railway (server), Vercel (frontend)

Features: User authentication, responsive UI with dark/light mode, real-time chat and image messaging, profile picture upload, online user indicators

Source code / Demo: <https://github.com/sandervenz/chat-app-mern> / <https://yapper-ten.vercel.app>

- **Digital Restaurant Menu Web App**

Fullstack Web Project – December 2024

A digital menu application for restaurants that allows users to browse and order food and beverages.

Tech Stack: HTML, CSS, Javascript, Typescript, Express, MongoDB, JWT, Vercel

Features: CRUD user (Browse and order menu items), CRUD admin (Add/edit/delete menu items, view and manage orders), Authentication for admin

Source code / Demo: <https://github.com/sandervenz/Projek-PW> / <https://web-foodscoop.vercel.app/>

EDUCATION

GUNADARMA UNIVERSITY | Depok, West Java

Bachelor's Degree in Informatics | 2022 – Present

SMA CAKRA BUANA | Depok, West Java

Science Major (MIPA) | 2019 - 2022

SKILLS

- **Programming Languages:** JavaScript/Typescript, PHP, Python
- **Frameworks & Tools:** Express.js, React, Hapi.js, Streamlit, FastAPI
- **Database:** MongoDB, PostgreSQL, MySQL, Redis
- **Version Control:** Git, GitHub, Gitlab, HuggingFace Space
- **Cloud & Deployment:** AWS, GCP, Docker, Railway, Vercel, Netlify
- **Other Tools:** Figma, Blender, Rabbitmq, Socket.io, nodemailer, draw.io
